EDUCATION

University of Michigan **Ann Arbor, MI**

Bachelor of Science in Engineering in Computer Science *September 2023 - May 2027*

GPA: 3.4 / 4.0

Coursework: Bayesian Methods for Machine Learning, Machine Learning Research Experience, Computational Linguistics, Web Systems, Introduction to Operating Systems, Data Structures and Algorithms, Electronic Circuits, Digital Logic Design, Computer Organization

TECHNICAL SKILLS

C++, C, Python, PyTorch, Pandas, NumPy, JavaScript (React), REST API, SQL, JSON, HTML, Postman, Swagger, Java, R, MATLAB, Linux (Ubuntu), GitHub, Unreal Engine, AWS

WORK EXPERIENCE

Stryker IT – Multidisciplinary Design Program *January 2025 – Present*

- Accelerate Stryker's Software Development Life Cycle (SDLC) process by designing and implementing a **Microsoft Azure-based multi-agent** platform, that sequentially converts user inputs into requirement artifacts, creates codebase and repositories from the requirement artifacts, and generates testing documentation from the codebase, achieving 70% draft completeness across the entire project lifecycle

PROJECT EXPERIENCE

Michigan Ross Business + Tech: AI Hackathon 2026 – Top 5 Finalist *February 2026*

- Designed and implemented proof-of-concept vision-enabled AI video annotation tool and integrated chat assistant for the university's learning management system (LMS)

Academic Projects *September 2023 – Present*

- Implemented a **Claude-based Multi-Agent Debate** framework to improve the accuracy of LLM outcomes
- Created an "Instagram" web interface having client-side and server-side dynamic pages using Python, React / JavaScript, REST API, SQL, and deployed it to AWS EC2
- Developed a text-classifier in C++ using Machine Learning (ML) and Natural Language Processing (NLP) techniques. Classifier was trained using 11,366 posts and was able to correctly categorize 87% of posts in a dataset of about 3,000 posts
- Created a Stock Trading Simulation utilizing priority queues, templated containers, and inheritance

Perot Jain Tech Lab – Electrification Cohort *January 2025 – December 2025*

- Designed a roof-top solar panel system that generates more than 1 kWh of power for personal and work RVs produced by Electric RV startup (Grounded)
- Completed market and customer analysis & handled project management utilizing Agile/Scrum methodologies

LuCelegans (Faculty Engineering/Arts Student Project Team) *January 2024 – July 2024*

- Software Subteam Member - Built a 2-meter-long interactive 3D model of Caenorhabditis Elegans (a nematode worm), to model neural pathways in the worm
- Created C++ and Python programs to control illumination of neural circuits based on sensory inputs received.
- Worked on building neural circuit hardware in the worm by integrating sensors, Arduino UNO, and Raspberry Pi

LEADERSHIP EXPERIENCE

MiRcore Summer Research Camp **Ann Arbor, MI**

Mentor *June 2025 – August 2025*

- Taught groups of six students to complete big data analysis using microRNA sequencing data of cancer patients for RNA biomarker analysis, tumor prediction using machine learning tools, and graph generation using R

FIRST Robotics **Novi, MI**

Drive Team Lead / Programmer / Programming Mentor *September 2016 - Present*

- Developed Autonomous and TeleOperation programs in Java. Since 2021, I have been a programming mentor for middle school robotics teams, teaching students Java and Block programming

ACTIVITIES

Claude Builder Club (University of Michigan) *October 2025 – Present*

Michigan Data Science Team (University of Michigan) *September 2025 - Present*

College of Engineering Honors (University of Michigan) *January 2025 - Present*
